

Jess Walsh

## **Unit 1**

### **Opportunist Threats**

An example of this is if someone leaves them self's log on in the college network and someone walk's past and puts in a pen drive with a virus on it, it will go through the whole network and shut down the whole college system.

### **Computer Viruses**

Someone can put a virus onto your computer which will cause damage to that computer.

### **Malware**

Malware can cause your computer to crash and it can also give people access to the information on your computer.

### **Phishing**

This is when you get a email sending you to click a link and when you do it take you to a fake website and the people who run the link get you details.

### **Accidental Damage**

This is when you accidental in some way break your computer e.g. breaking the fan or spilling water on the computer.
